

RETHINKING HOW WE VIEW VIOLENCE

Karen Volker

Director of Partnership and Violence Prevention

Applying a Health Approach to Reducing Religiously Motivated Violence

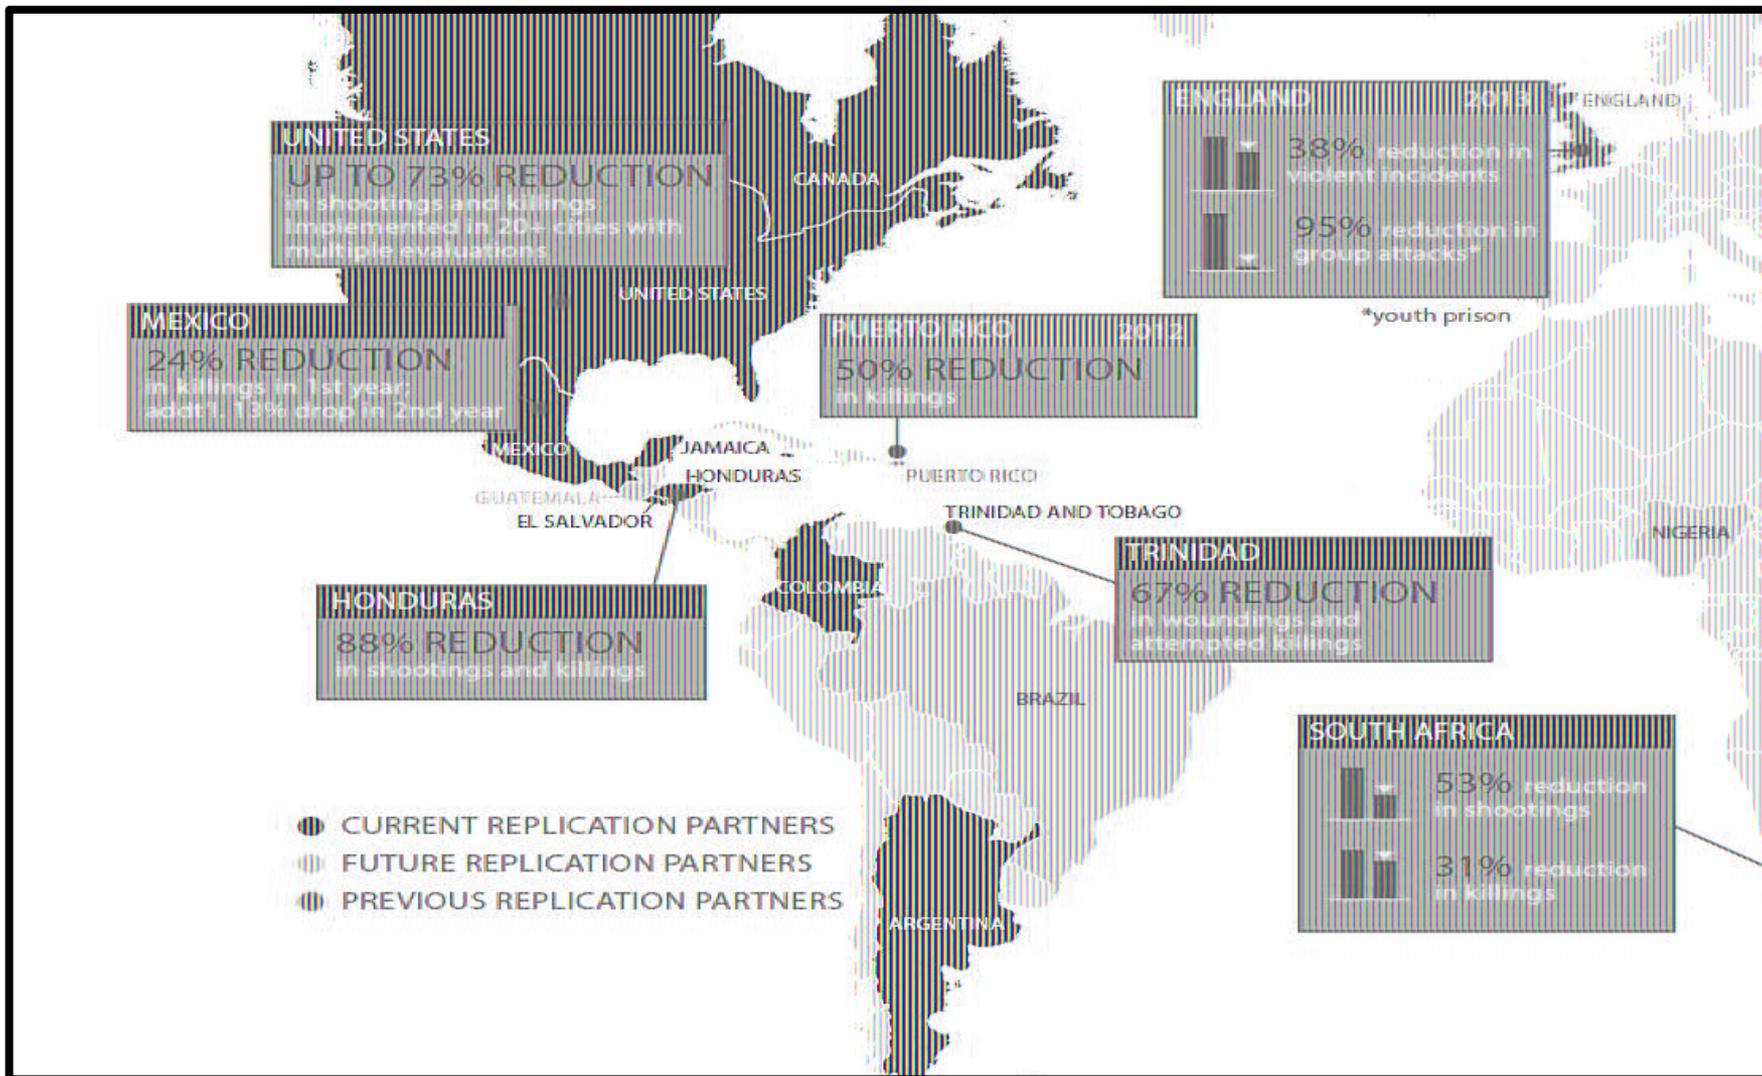

Note: We are focused on
all interfaith efforts to
reduce violence

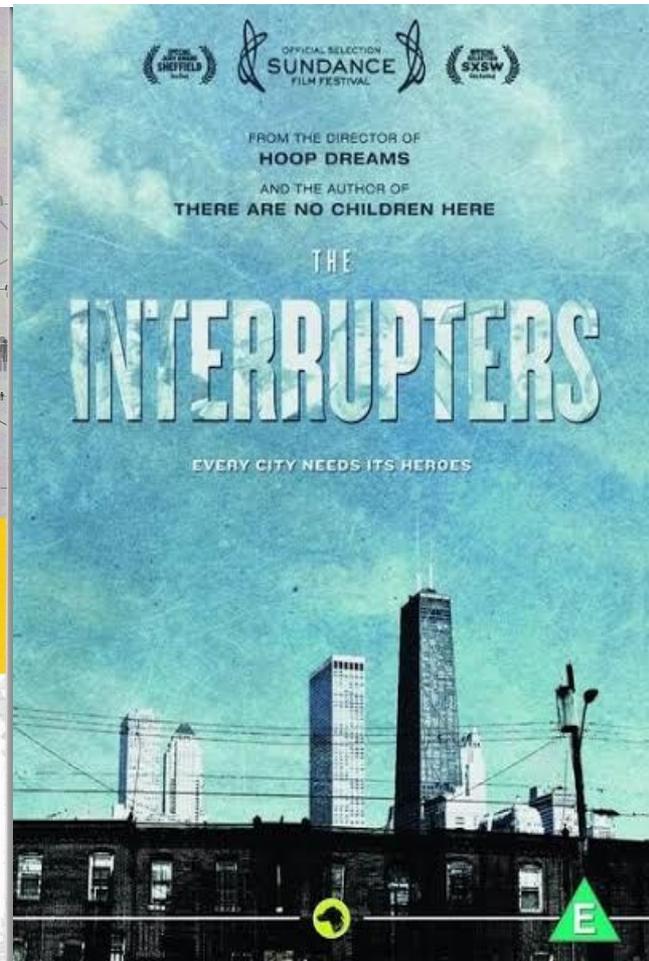

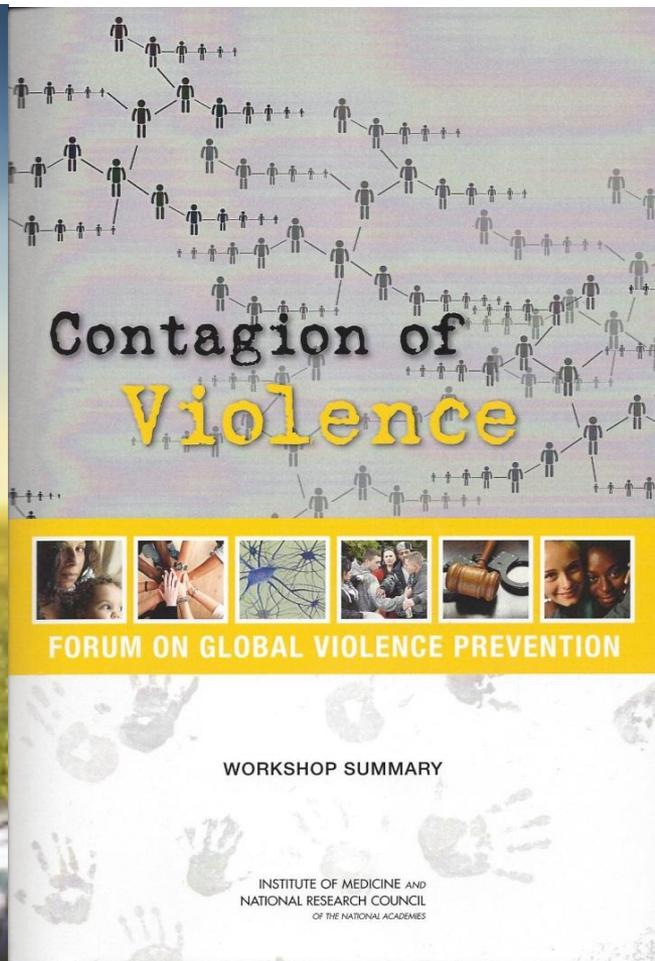

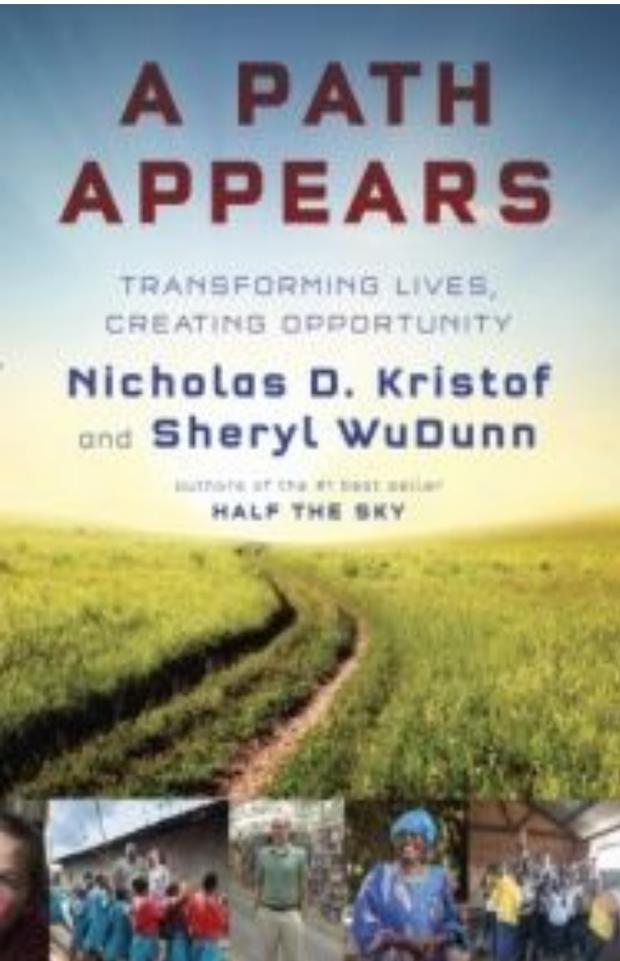

**The health approach to
preventing violence
is based on the approach
developed by *Dr. Gary Slutkin*,
founder of
Cure Violence Global.**

www.cvg.org

Proven Results & Many Adaptations

“Cure Violence...the approach that will come to prominence.”
- *The Economist*

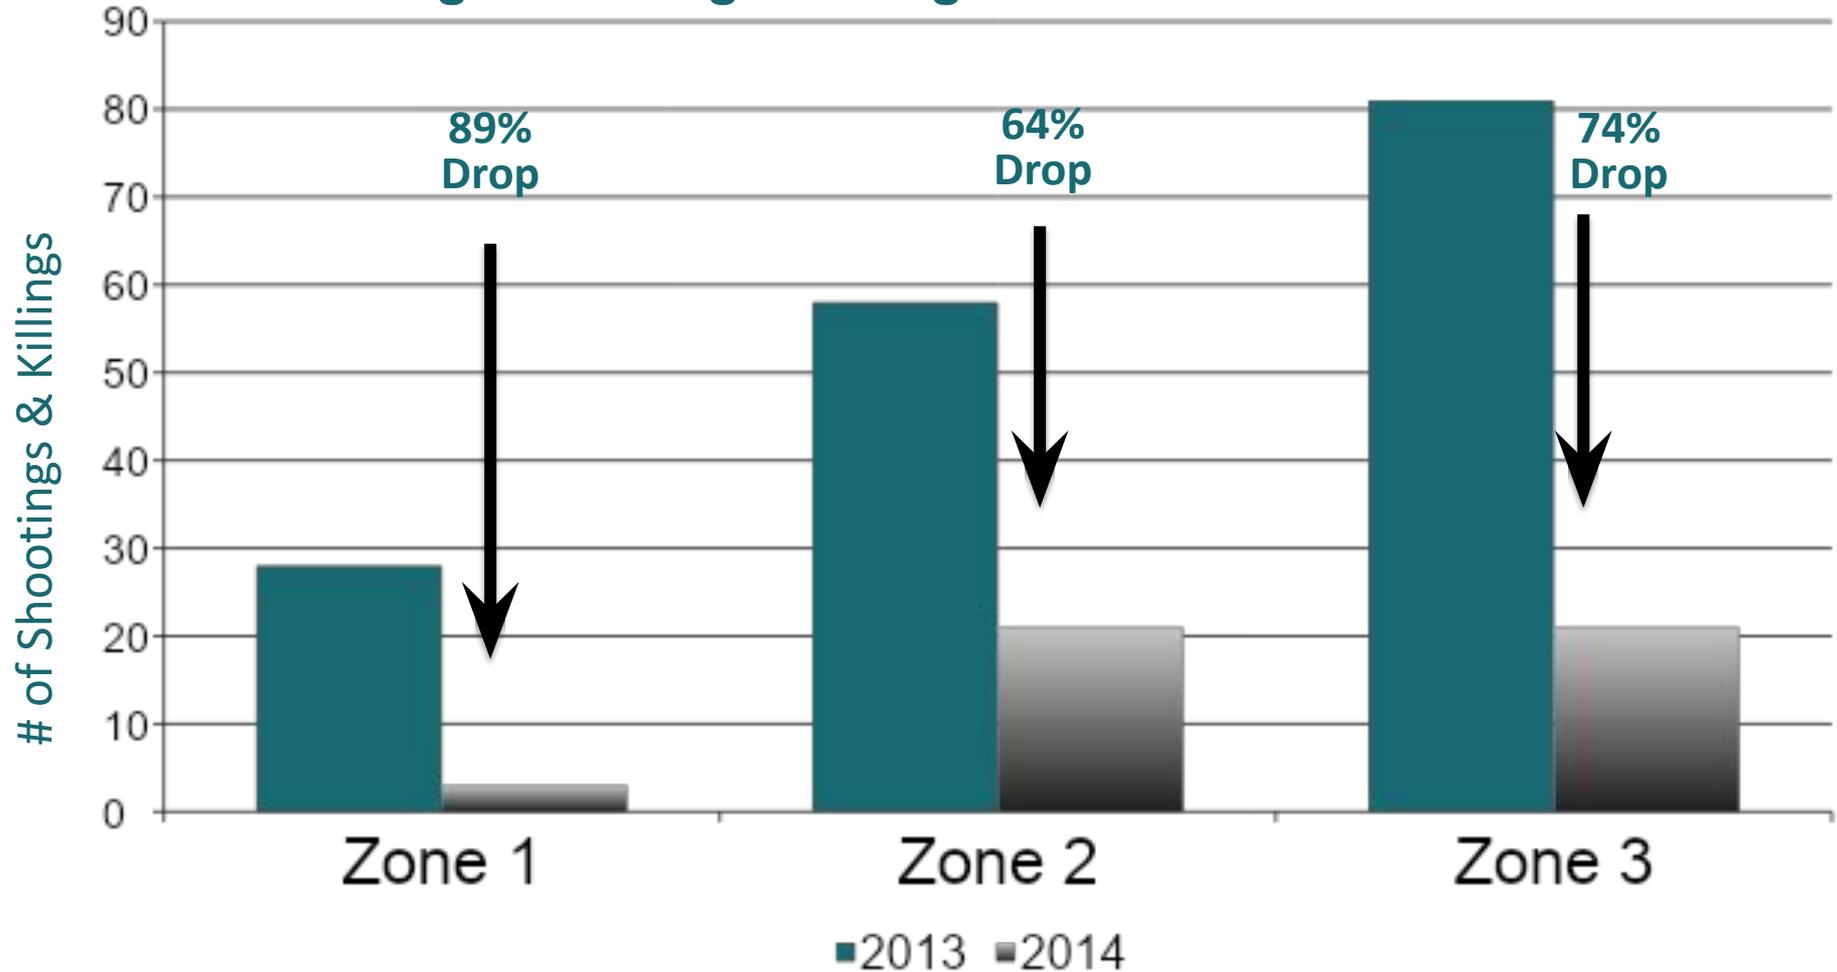

Cure Violence – Example of International Adaptation Partners

Cure Violence San Pedro Sula, Honduras

Average shooting & killing reduction = 73%

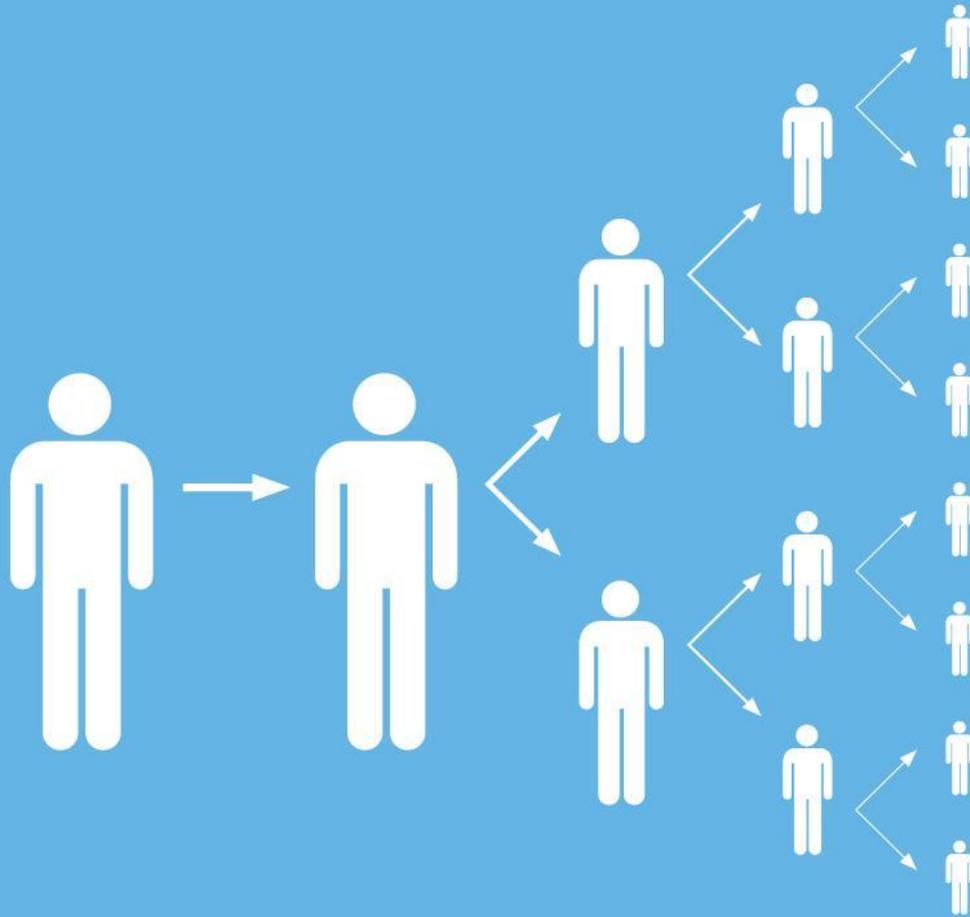

Ransford, et al. (2016). Report on the Cure Violence Model Adaptation in San Pedro Sula, Honduras.. Chicago, IL: University of Illinois at Chicago.

Measured Success - Global

	Shootings and Killings	Other	Ref
Ciudad Juárez, Mexico	- 50% to -75% killings	Community much safer	Observatorio Ciudadano, 2016
San Pedro Sula, Honduras	-88% shooting & killings (avg. 5 sites)	Streak to 17 mos.	Ransford, 2017
Trinidad	- 38% shootings - 39% killings - 45% violent crime	-50% violent crime	Maguire, 2018 (unpub)
Cape Town, S. Africa	-14% killings	-29% attempted killings	Ransford, 2017 (unpub)
Halifax, Canada	-100% killings	Pro-social attitudes, more	Ungar, 2016
Puerto Rico	- 53% killings		PR site reports
UK prison	-51% violence -95% group attacks		UK Prison eval, 2014

If Violence is an Epidemic Health Problem...

Then it can be treated with a health approach...

What as a Health Approach?

Violence
is a
BEHAVIOUR

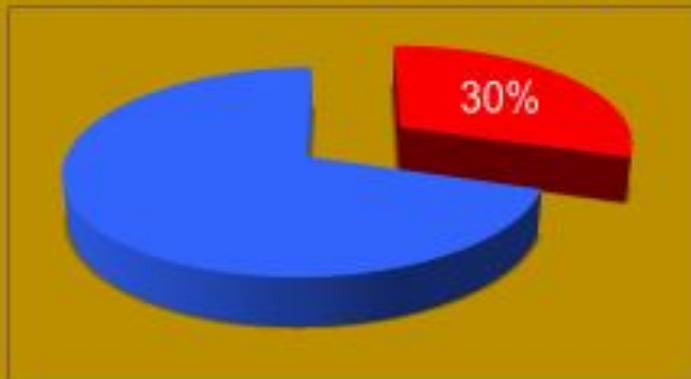

...that can be
PREVENTED

...that acts or
spreads like a
CONTAGIOUS
PROCESS

Multiple Studies
have demonstrated
the contagious nature
of violence

Exposure to Violence → Perpetration of Violence

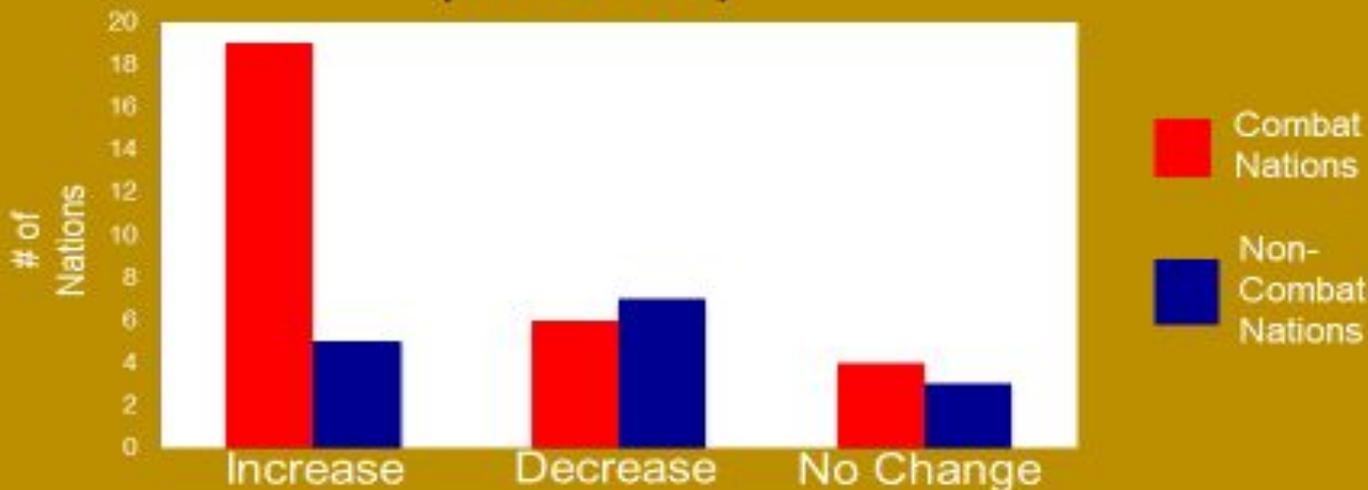

Child Abuse Victims Becoming Abusers

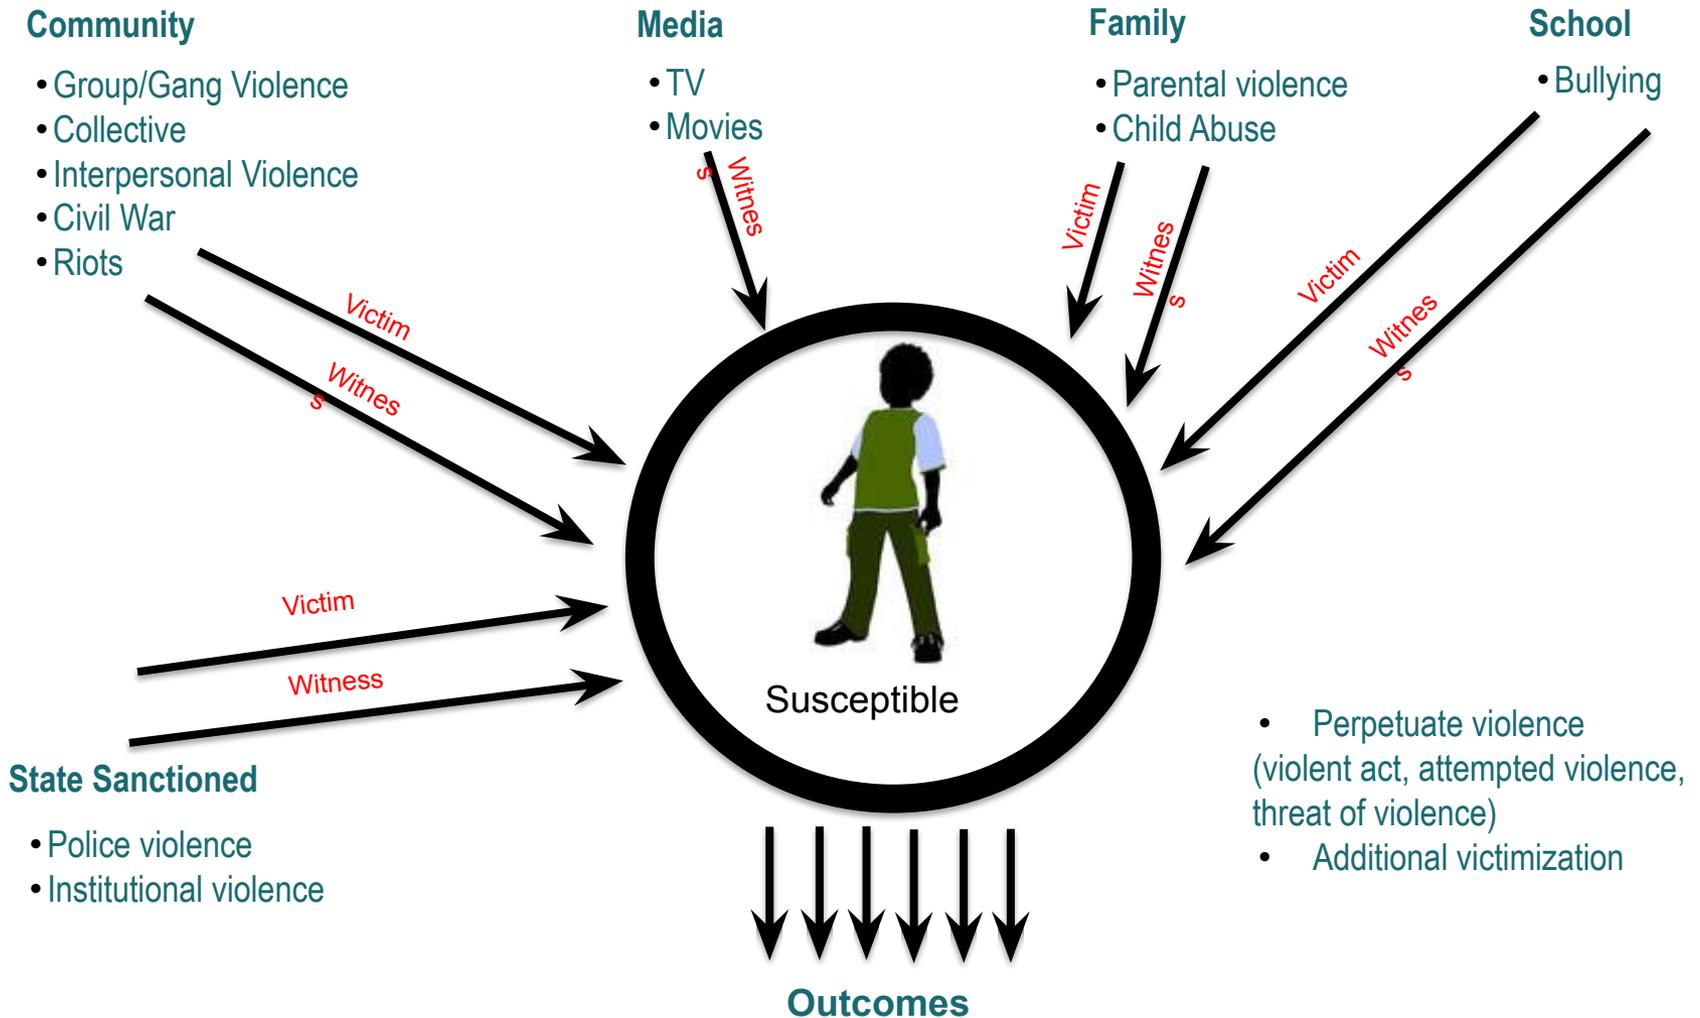

Chronic Exposure to Community Violence Associated with Perpetration

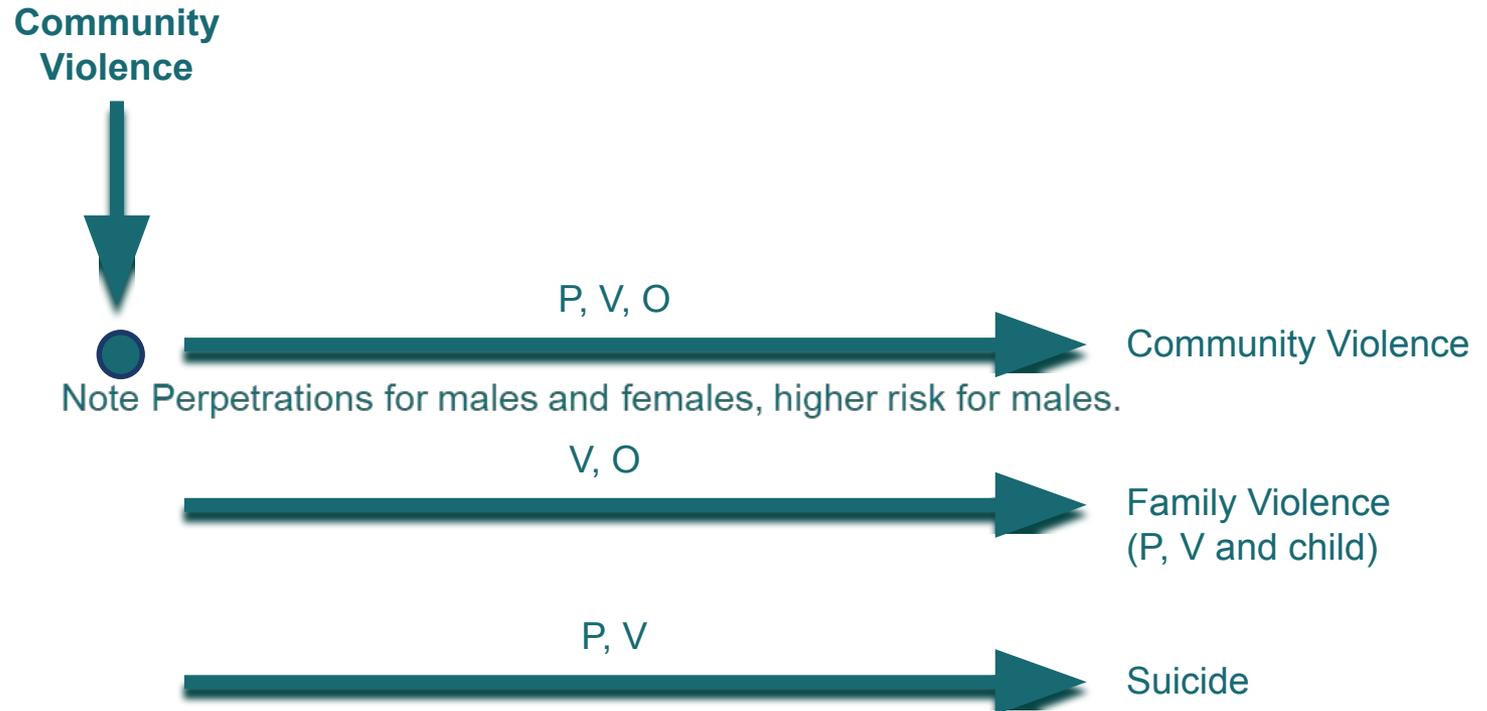

Community Violence Increases Post War (WW1 & WW2)

Methods of Exposure to Violence

Transmission across Syndromes

Note Perpetrations for males and females, higher risk for males.

Barkin et al 2001, Hanson et al. 2005

Violence is contagious in all syndromes

COMMUNITY

RELIGIOUSLY MOTIVATED

SPOUSAL

FAMILY

CHILD

SUICIDE

MASS SHOOTING

WAR

VIOLENT EXTREMISM

Violence as a Contagion

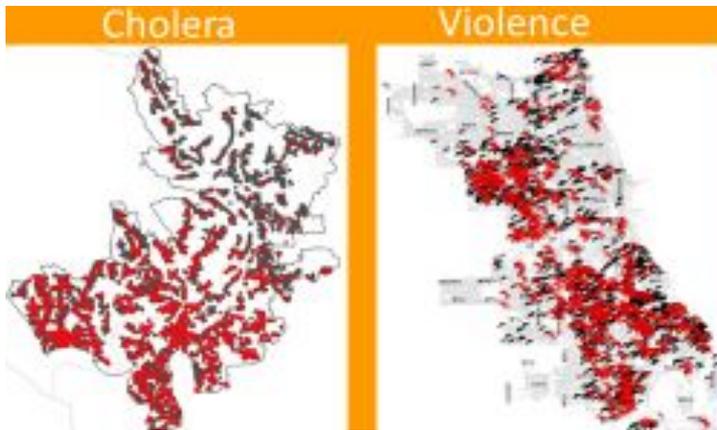

Population characteristics

- ❑ Clustering
- ❑ Spread
- ❑ Transmission

Scientific Understanding of Violence

Violence has all three characteristics of an epidemic disease.

1. Violence clusters like a disease

2. Violence spreads like a disease

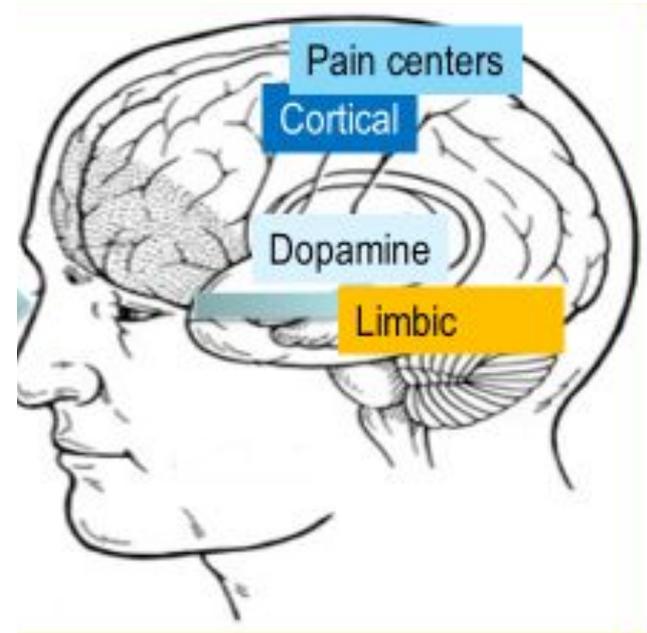

3. Violence transmits

Through exposure, modeling, social learning, and norms.

Means of Transmission

Violence
Transmission
Observing
Witnessing
Trauma

Brain Processing

Intake → Processing → Disease

Modulating factors: age, prior immunity, type of exposure, dose, context, other

What is Known About the Transmission of Violence?

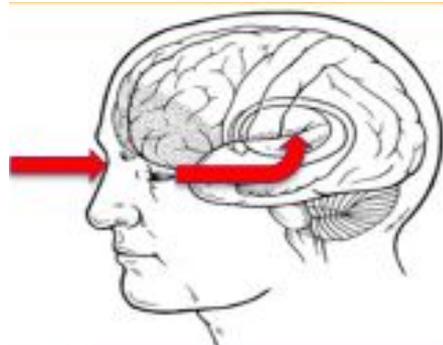

1. Social Learning

2. Social Norms

3. Neurological Effects

4. Modulation Factors

Stopping Epidemics

- ❑ **Interrupt Transmission**
- ❑ **Prevent future spread**
- ❑ **Change group norms**

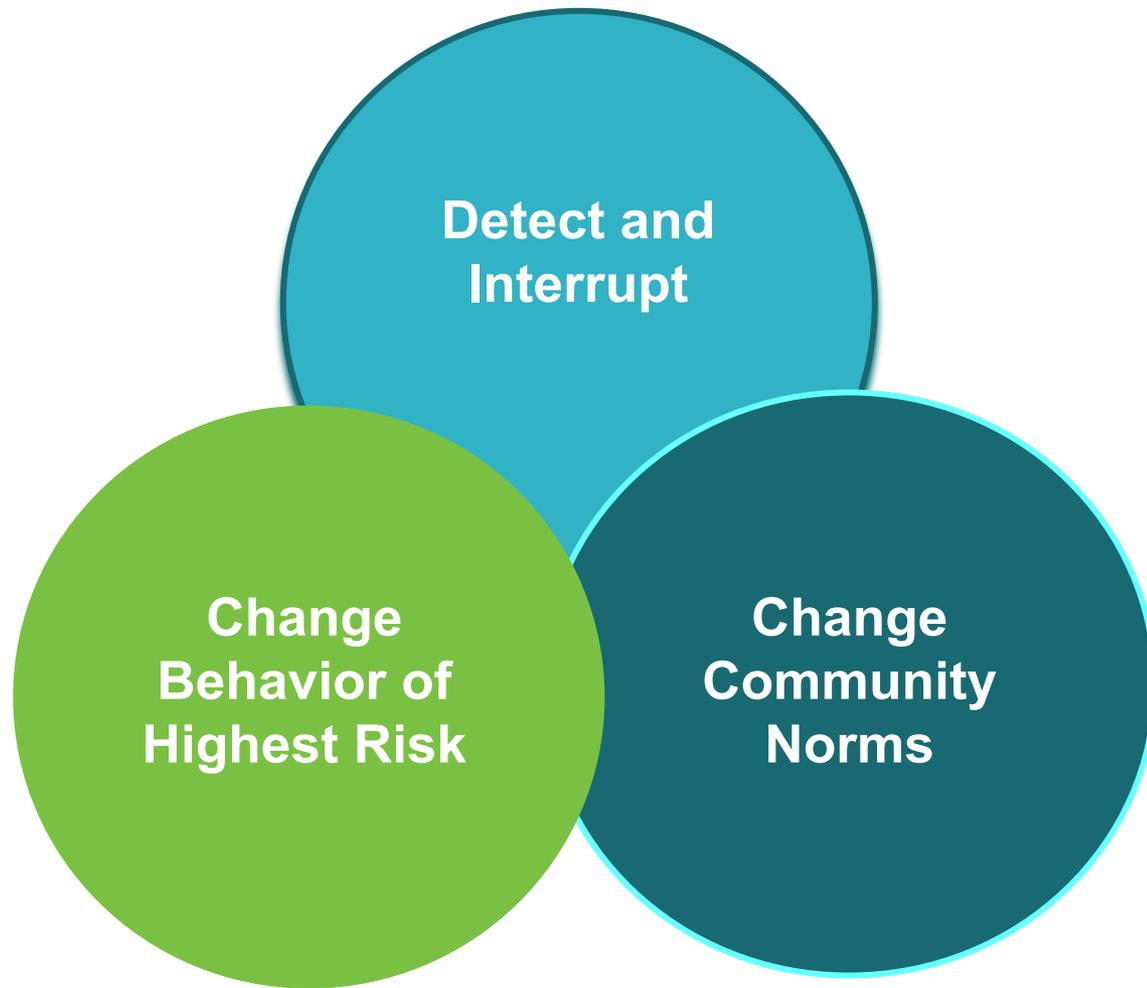

World Health
Organization

Public Health Methods

- ❑ **Detect events early**
- ❑ **Prevent spread**
- ❑ **Work with community in acceptable ways**
- ❑ **Reach hardest to reach**
- ❑ **Change behaviors**
- ❑ **Change norms**
- ❑ ***Focus***

*The public health approach
Is inherently grassroots!*

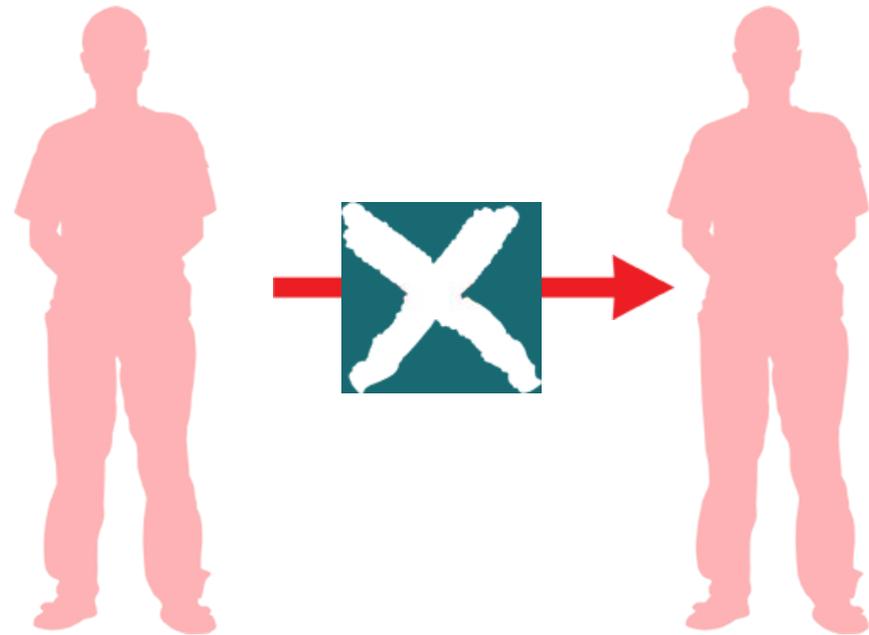

The 3 components of the Health Approach to violence interruption

1. Detect and Interrupt

Where is the violence happening and how can it be interrupted?

Interrupt Transmission

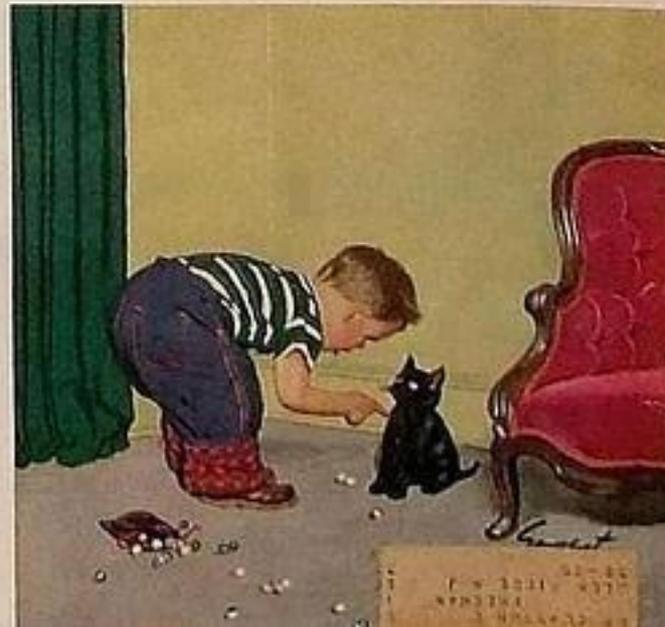

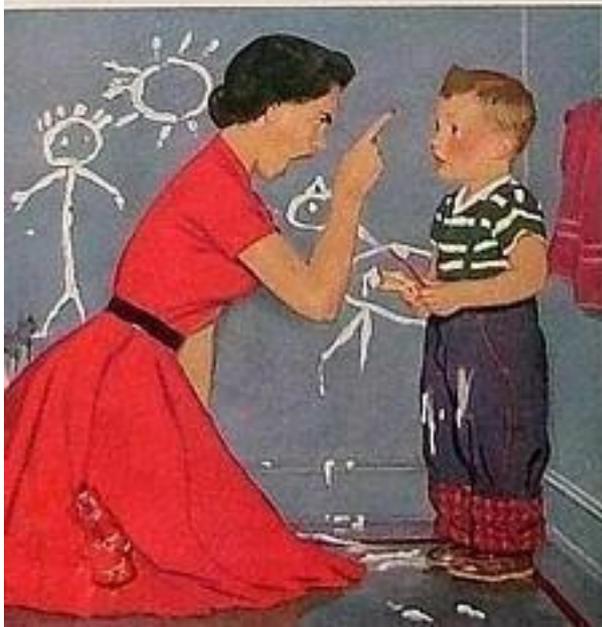

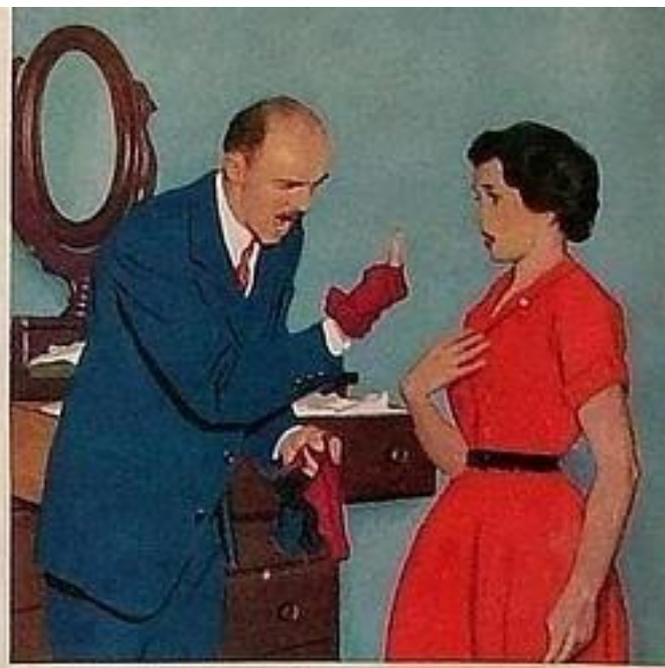

Interrupters

- ❑ **Criteria**
 - ❑ **From inside/same group**
 - ❑ **See that/want violence to stop**
 - ❑ **Trust, access, credibility**

- ❑ **Mode**
 - ❑ **Total transparency**
 - ❑ **Nothing to be found out**
 - ❑ **No betrayal possible**
 - ❑ **Assigned to look for way out**

Could CC members become violence interrupters?

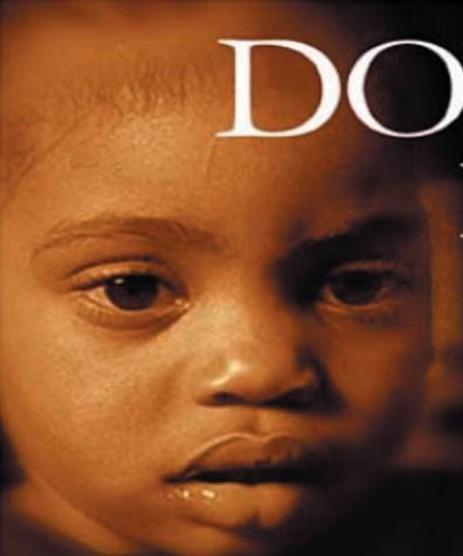

2. Behavior Change

Identifying those at highest risk for violence and working to change their behavior.

3. Community Norm Change

**Changing norms related
to violence**

***Religious leaders are in key positions to
change norms related to violence***

DON'T SHOOT.
I want to grow up.

**CHANGE
NORMS**

CeaseFire Hotline
866-TO-CEASE
www.ceasefireillinois.org

**Stop.
Killing.
People.**

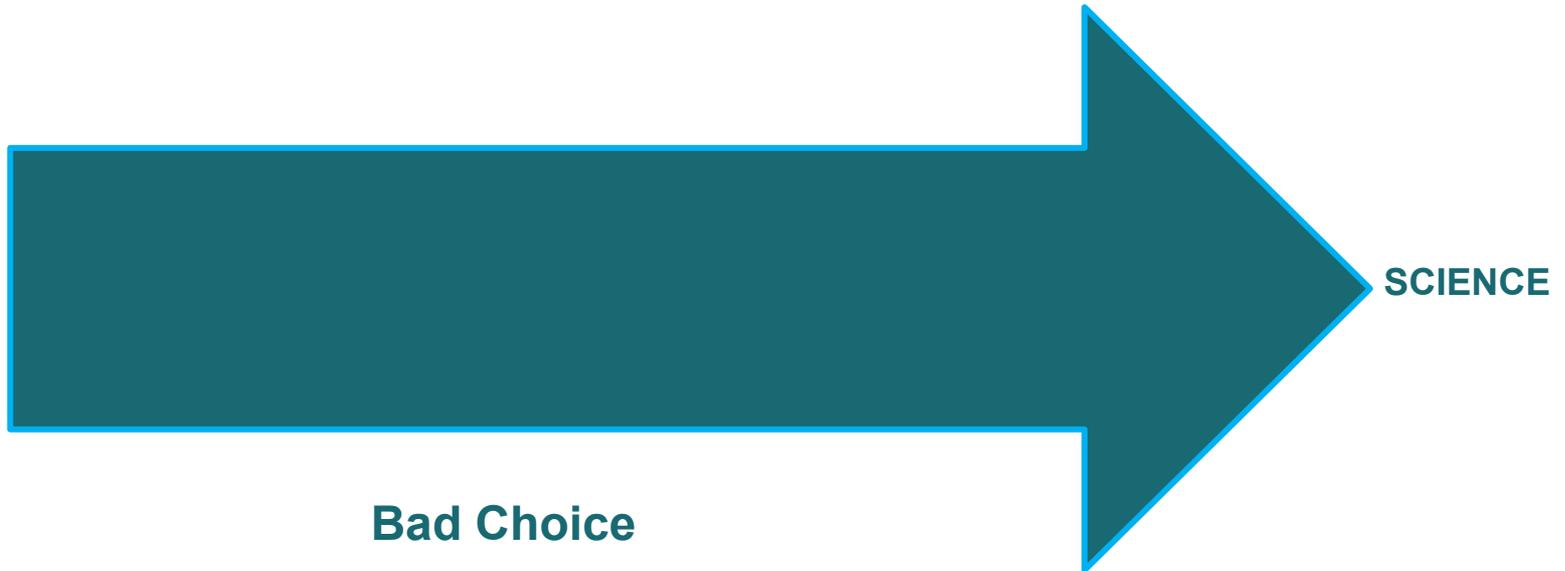

Don't Shoot!

Re-Understanding Violence

Reduces current inequity and promotes understanding

SCIENCE

Moralism
(not helpful)

Bad People

Bad Choice

Adverse
Circumstances
(contribute)

TRANSMISSION
exposure

After Decades of Effort, Why is Violence Still a Serious Issue? Because we have misdiagnosed the problem...

Old Thinking	<i>New Scientific Understanding</i>
Moralistic judgments	<i>The latest brain research on thinking and decision-making</i>
“Bad” Individuals	<i>Learned (contagious) behavior (which can be unlearned)</i>
Gang-related	<i>The power of group and community norms</i>
Imprisonment	<i>Prevention through changing behavior and influences</i>

Health Epidemic Approach Adds New Synergies

1. Police and military Efforts	2. Political and Diplomatic negotiations	3. Adding public health
<ul style="list-style-type: none">• <u>Kills and apprehends offenders, enemy</u>• Some – but not all• Major hostilities remain as well as reprisals• Displaces• Recruits new combatants• Perpetuates contagion	<ul style="list-style-type: none">• <u>Addresses grievances (some)</u>• Not everyone agrees• Takes years or decades• While violence, death, etc. continues as talking does or does not occur	<ul style="list-style-type: none">• <u>Focuses on Violence First</u>• Prevents lethal events• Prevents retaliations• Offers face saving• Reverses social pressure to perform acts• Mobilizes whole community• Changes norms• Simultaneously increase impact of other programs and the potential for diplomatic and police / military approach to succeed• Can prevent violence outbreak relapses

Identifying Credible Messengers

- ❑ Potential credible messengers have to be identified to help achieve goal of preventing violence of all types.
- ❑ In most cases the “credible messenger,” will have lived the same type of life as those who are leading or doing the violence (have prior ties to the groups, responsible, are still known to the target population, and reside in the target area).
- ❑ Religious leaders are well positioned to help identify these individuals.

In Order to Prevent Violence, We Must First Understand the Context in Which It Is Happening

Can it be interrupted locally?

- Where is it happening?
- When is it happening
- Who is doing it?
- Is it in retaliation for another event?
- What groups are involved?
- Who is influential with these people?

Discussion

- What of this resonates with you?
- What does not?
- Do you believe the URI network members could be or already are key influencers?
- Think of the main instances of religiously motivated violence:
 - Who are the key people that need to be reached to stop the violence?
 - Who can reach these people
 - Who is following and could be persuaded not to follow?
 - Who can reach those people?
 - What norms are supporting this behavior
 - What are the specific roles for religious leaders
 - How can they best be utilized to prevent the violence?
